MAINTENANCE & SUPPORT (LEGACY SOFTWARES)

Adaptive maintenance and support

Corrective maintenance and support

Perfective maintenance and support

Preventive maintenance

CLOUD MIGRATION
From on premises or managed / semi managed server instances to MS AZURE platform

SOFTWARE SUPPORT SERVICES
While retaining the data and processes that legacy systems and programs were originally designed to capture and support, these systems and programs have to be integrated with the emerging ones at the same time.

LEGACY SYSTEM INTEGRATION (Softwares)

When your company starts growing and expanding, you are likely to face a problem of legacy system integration with new technologies. As old softwares are difficult to integrate, it is best to leave this process to experienced professionals. Our software developers will handle legacy integration with minimal disruptions to your business.

SOFTWARE DEVELOPMENT
Many companies are now opting to outsource the maintenance of legacy software to offshore software developers. This enables them to focus on R&D and Innovation which are more important. We are able to carry this out for you and develop software for the legacy systems.
